## Delivery of Murrumbidgee IVT to Commence in December

19 November 2020

WaterNSW is advising customers that delivery of water from the Murrumbidgee Inter Valley Trade (IVT) account is now scheduled to commence at Balranald from first week of December 2020.

The Murray-Darling Basin Authority (MDBA) has requested that WaterNSW deliver a volume of up to 30 GL in the month of December. The Murrumbidgee IVT account has a current balance of about 102 GL.

WaterNSW is targeting a daily clearance rate of approximately 1,000 ML/day in December. The IVT is a volume delivered in excess of the end of system flow requirement, which is about 254 ML/day meaning the flow at Balranald will be around 1,300 ML/day while IVT delivery is occurring.

The IVT account will be adjusted based on the accumulated daily delivery volume, and the account updated at 9 am each day as per the standard procedure. Allocation assignment (temporary trade) out of the Murrumbidgee valley would reopen once the account reaches 85 GL.

The process for how the account is managed, including triggers for open and close of trade, can be found at WaterNSW [website](#).

MDBA may call IVT delivery to continue beyond end of December into the summer. WaterNSW will provide advice to customers regarding additional call on IVT water delivery when requests are made by MDBA.
