Refilling of Stevens Weir Pool

2 August 2019

We are advising our customers and community that refilling of Stevens Weir pool on the Edward River is planned to commence on 7 August 2019 in preparation for the commencement of the irrigation season.

The level upstream of Stevens Weir will be increased gradually. The Edward River height upstream of Stevens weir is currently about 3.9 m and is expected to be approximately 4.4m when the current filling of the weir pool is complete by 10 August 2019.

WaterNSW advises river users within the influence of the Stevens weir pool, and within the Edward – Wakool River system, to be aware of changing river levels during the coming weeks. Customers are advised to make early preparations for fluctuating water levels in their area during the refill process.

WaterNSW customers, boat owners, landholders and other river users are advised to monitor water levels closely and plan their activities accordingly
