

Lachlan Valley

Lake Rowlands Dam to Carcoar Dam Pipeline

December 2019

Proposed pipeline option

WaterNSW has been engaged by the Department of Planning, Industry & Environment (DPIE) on behalf of the NSW Government to develop a Detailed Business Case for a proposed pipeline between Lake Rowlands Dam and Carcoar Dam.

The proposed pipeline will transfer water from Lake Rowlands Dam to Carcoar Dam at times when appropriate supply volumes are available. This will result in more efficient storage of available water and an increase to the general security water availability for the Belubula valley.

The pipeline corridor will extend between the two dams along existing roads and through private property. Construction would not start until after the detailed business case has been approved by the NSW Government.

WaterNSW has been consulting with key stakeholders and landholders, and conducting comprehensive environmental and engineering studies to inform the development of the proposed pipeline alignment. The project team has finalised preliminary investigations and has recommended the preferred infrastructure solutions to construct the pipeline (see over for map of this alignment).

Project benefits

Providing a greater level of water reliability and security in the Belubula and Lachlan Valley

Assist in securing the future of urban water in the Lachlan and Central West regions

Benefiting the regional economy through sustainable water supply, improving agricultural productivity and certainty in business decision making

Community information session

Please join us for a community information session. This will be an opportunity for you to learn more about the project, ask questions, and to provide feedback.

There will be more information sessions held in the new year.

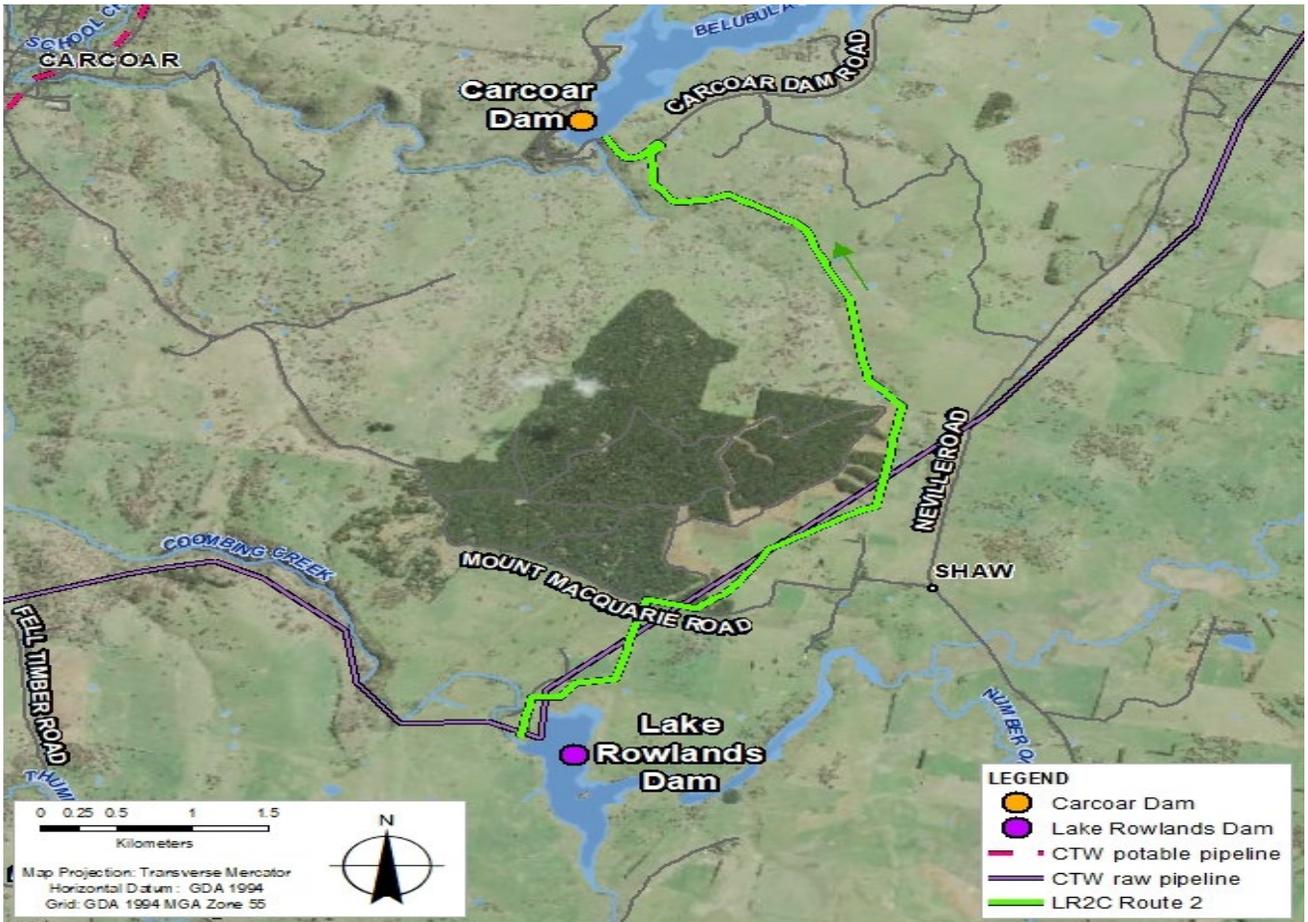

Blayney Shire Community Centre
41 Church Street, Blayney
4:00 pm – 6:30 pm
Tuesday 17 December 2019

Get in touch

It's important for us to understand the needs and concerns of the community and key stakeholders to develop the Detailed Business Case.

Please get in contact with us if you have any questions or feedback relating to this project.
