

Water access licence exemption for aquifer interference activities taking 3ML or less of groundwater per year

Frequently asked questions (FAQs)

What activities does the exemption apply to?

The exemption only applies to aquifer interference activities where the water is not being taken for the purpose of its consumptive use or supply. For example, the exemption applies to water taken to ensure safe and efficient excavation when constructing buildings and does not apply to water taken for irrigation or town water supply.

How do I know if my activity is aquifer interference?

Works or activities that intersect or interfere with groundwater systems and where take is incidental to the primary purpose of the activity, or where there is no take, are managed as aquifer interference activities. Works or activities that are for the purpose of supplying water for consumptive use are managed as water supply activities.

Why is the exemption set at 3ML per year?

3ML per year is similar to the volume of water taken by landholders in accordance with domestic and stock rights held under section 52 of the *Water Management Act 2000*, for which a water access licence is not required to be held.

What if I take more than 3ML?

A water access licence and appropriate entitlement are required if your aquifer interference activity takes more than 3ML of groundwater in a water year. Refer to this [fact sheet](#) for more information.

Can I use the water I take?

Yes. Groundwater taken incidentally may subsequently be used for consumption or supply (for example for dust suppression, washing equipment or mixing concrete).

What about the cumulative impacts of water taken under this exemption?

The risks from potential cumulative impacts of this exemption are low as many of these activities are temporary and take only small volumes of groundwater. The exemption also formalises longstanding licensing practise so is unlikely to generate an increase in take from groundwater systems. A major benefit of the exemption for water management is that proponents must report the volume of groundwater taken.

My activity is complying development – can I claim the licence exemption?

Yes. Complying development is an authorised activity under the *Environmental Planning and Assessment Act 1979*.

Is the first 3ML of groundwater taken by mining or coal seam gas production exempt from needing a licence?

No. The exemption only applies for these activities at the exploration stage. A water access licence and appropriate entitlement are needed for any groundwater taken at the production stage of mining and petroleum activities.

Do the metering regulations apply?

No. A meter is not required to measure water take, but the method used to measure the water taken must be reported.

How do I report my take?

For the current water year, complete the [groundwater take under exemption form](#) which is available on our website.

Why do I have to report water taken under this exemption?

Records of water taken under a licence exemption provide a greater understanding of the full volume of water being taken from a groundwater source under licences, basic landholder rights and exemptions each year. This will inform decision making and enable better management of the groundwater source.

I am only taking a few hundred litres of water – do I still need to record and report the water taken under the exemption?

Yes. Please visit our [Recording and reporting webpage](#) for more information.

Can I report my take under several exploration titles that are part of one project on one form?

Yes, but it must clearly be indicated which title (authorised project) the take belongs to.

Can I still report my take after 29 July for the current water year?

Yes. The reporting form should be used to report any take made under the exemption during the current water year.

More information

Please see our [fact sheet](#) for this exemption.
