

Wallamundry Creek System

Lachlan River

25 March 2019

WaterNSW advises that due to the Lachlan Regulated River currently being in drought stage 3 and the current higher levels in Lake Cargelligo there will be reduced flows in the river. Consequently, lows passing through the Wallamundry system will be lower.

There will continue to be a target of around 60ML/d at the Wallamundry Creek offtake. A conditional permit has been issued by the Department of Primary Industries (fisheries) during this low flow period for the closure of the Island creek fish passage which will assist in the delivery of water into the Wallamundry system if the flows fall too low.
